

Hangar & FBO IT Checklist

What to check before — or during — a hangar buildout or expansion.

- ☐ **Fuel-pump & POS network reliability**
No dropped connection mid-transaction at the fuel island or UNICOM desk.
- ☐ **Pilot lounge & waiting area Wi-Fi**
Coverage that actually reaches the seating area, not just the front counter.
- ☐ **Camera coverage**
Hangar entry doors, aircraft parking/ramp, and the fuel island.
- ☐ **Cabling for metal hangar structures**
Long roofline runs, RF interference from metal siding, weatherproofing at exterior-adjacent runs.
- ☐ **Access control**
Hangar doors and restricted ramp areas — who can get in, and when.
- ☐ **Backup connectivity**
Cellular failover — many general aviation airports have limited ISP options.
- ☐ **Scheduling around operations**
Installation planned around aircraft movement and irregular hours.
