

IT Checklist for Veterinary & Animal Care Practices

What to check for a practice that's open, monitored, or boarding around the clock.

- ☐ **Remote camera monitoring for overnight boarding**
Real visibility into the kennel area, not just a hope it's fine.
- ☐ **Network reliability sized for practice-management software**
Built for actual daily load, not an afterthought.
- ☐ **Backup and recovery plan for patient and client records**
Verified working, not just scheduled.
- ☐ **Guest Wi-Fi kept separate from practice systems**
Client access walled off from clinical and billing systems.
- ☐ **Multi-location connectivity, if applicable**
Consistent setup across every location, not one-off configs.
